

# Vertical Symmetry

Ryan Dickherber

Jan. 9, 2008

After he became wealthy, Bertrand bought a vertical mirror. Most people are familiar with horizontal mirrors, which flip things left to right, but vertical mirrors, which are less common, flip things top to bottom. At a party he held shortly after his purchase, Bertrand discovered that a substantial number of people looked the same in his vertical mirror as they did in real life.

He kicked those people out of his house.
